Working Projects

TechCom — A computer service-based project

- A project where user can take the service of their choice through Stripe payment gateway and write their review about the service which will dynamically show at home.
- This project also has Admin features. They can delete a service or add a new one.
- Both Admin and user have different dashboard.
- In this project I am using React. Firebase for authentication. Node and MongoDB for back-end.
- Live: <https://teachcom-aa9f4.web.app/>.

Food Bazar — A food ordering Project

- The work of this project is that the user will be able to order a variety of food and the user can also check the number of food orders if he wants. For that he must logged in.
 - The logged in user can also add food.
 - There is also the option to delete food from the admin panel.
- In this project I am using React. Firebase for authentication. Node and MongoDB for back-end.
- Live: <https://food-bazar-b4116.web.app/>

English Premier League — A history-based project

- This project based on the English Premier League, the English Football League. The names and themes are inspired from there.
- In this project you will learn about the different teams in the English Premier League.
- Live: <https://premier-leagueeee.netlify.app/>
